Immersion Temperature Sensors

QAE3010...
QAE3075...

Use

The sensors are used for acquiring the temperature of liquid or gaseous media (e.g. heating water) in heating, ventilation or air conditioning plants. They are designed for use in connection with automation equipment, display and logging devices.

Ordering

When ordering, please give name and type reference according to "Type summary",
e.g. immersion temperature sensor **QAE3010.010**

Mechanical design

The sensor consists of an exchangeable insert with the sensing element and a connecting head with a removable cover. The connecting head is made of aluminium. Among other components, the connecting head accommodates the terminal block for the electrical connections. The insert consists of a 70 mm neck tube made of stainless steel and a G $\frac{1}{2}$ threaded bushing with sensor sleeve. The sensing element is located at the end of the sensor sleeve. The sleeve is suited for operating pressures up to 40 bar.

Mounting notes

If possible, mount the sensor in a pipe bend facing the direction of flow. Make sure that the medium is properly mixed where the sensor is located.
Choose the mounting location so that the insert can be easily replaced.

The sensor is supplied complete with Mounting Instructions.
